PROFESSIONAL SUMMARY

DevOps and Cloud Engineer with 2 years of experience building and operating cloud infrastructure across AWS and Azure, with additional hands on exposure to Google Cloud. Comfortable working across the full lifecycle of a DevOps role, from provisioning infrastructure with Terraform to running containerized workloads on Kubernetes and building CI/CD pipelines that teams rely on day to day. Has supported production systems through on call rotations and incident response, and has been steadily moving toward SRE practices such as defining SLIs and SLOs and tracking MTTR. Approaches infrastructure with a multi cloud mindset and is comfortable picking up whichever tools a team already uses rather than being tied to one ecosystem.

TECHNICAL SKILLS

- **Cloud Platforms:** AWS, Microsoft Azure, Google Cloud Platform (GCP)
- **Infrastructure as Code & Automation:** Terraform, Ansible, Python, Bash/Shell Scripting
- **Containers & Orchestration:** Docker, Kubernetes, Helm, ArgoCD
- **CI/CD:** Jenkins, GitHub Actions, Azure DevOps Pipelines, GitLab CI
- **Monitoring & Observability:** Prometheus, Grafana, AWS CloudWatch, Azure Monitor, Log Analytics
- **Databases:** MySQL, AWS RDS, MongoDB
- **Networking & Security:** VPC, Security Groups, Firewalls, DNS, SSL/TLS, Nginx, Load Balancers, IAM, Key Vault, Secrets Manager
- **Version Control & Collaboration:** Git, GitHub, JIRA
- **Operating Systems:** Linux/Unix administration

PROFESSIONAL EXPERIENCE

Cloud and Infrastructure Engineer, LTIMindtree

May 2022 - Jun 2024

- Provisioned and maintained AWS infrastructure for a microservices platform using Terraform (IaC), covering EC2, Auto Scaling, VPC, IAM, S3, and RDS, cutting environment setup time by about 50%.
- Administered Linux servers supporting production workloads, handling patching, resource tuning, and performance optimization to keep services stable under load.
- Ran Docker based containerized services on EKS, handling deployments and scaling, and moved image builds to ECR to keep the pipeline fully within AWS.
- Built CI/CD pipelines with Jenkins and GitHub Actions, managing source control and branching workflows through Git and GitHub, later moving deployments to ArgoCD for GitOps, which cut manual release work by around 40%.
- Configured Nginx and AWS load balancers for traffic routing, set up DNS and SSL/TLS for services, and controlled access using Security Groups and firewall rules.
- Managed MySQL and RDS databases, with some exposure to MongoDB, handling backups, recovery testing, and disaster recovery planning to protect against data loss.
- Implemented monitoring and observability using Prometheus, Grafana, and AWS CloudWatch across infrastructure, Kubernetes workloads, and application health, configuring SNS-based alerts, defining SLIs and SLOs, and tracking MTTR to catch issues before they escalated.
- Used CloudTrail to track account level changes for audits and incident reviews, and took on-call rotations using PagerDuty, documenting RCAs and runbooks after incidents to help the team resolve repeat issues faster.
- Wrote Python and Bash scripts to automate recurring ops tasks like backups, health checks, and cleanup jobs, and worked closely with development, QA, and security teams during releases to keep production stable.

PROJECTS

Azure AKS CI/CD Pipeline with Monitoring [\(GitHub Repo\)](#)

- Provisioned Azure infrastructure using Terraform, including a virtual network, an AKS cluster on B-series nodes, Azure Container Registry, and a Storage Account, keeping everything within free tier limits.
- Built a CI/CD pipeline in Azure DevOps to build, containerize, and deploy the application to AKS.
- Set up an Azure Function triggered by a storage queue to process background jobs and write results to blob storage.

- Configured Azure Monitor and Log Analytics with a CPU based alert routed to an action group, reflecting a basic SLO and on-call alerting pattern.
- Used Key Vault with a managed identity so no credentials were hardcoded anywhere in the pipeline.

Cloud Infrastructure Automation on Google Cloud Platform [\(GitHub Repo\)](#)

- Provisioned virtual machines and networking components on Google Cloud using Terraform, and automated server configuration using Ansible playbooks.
- Installed and configured MySQL for backend data storage.
- Validated system health using Linux logs and basic service checks.

EDUCATION

Lendi Institute of Engineering and Technology

Bachelor of Technology in Mechanical Engineering, 2020

CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate (AZ-104)
- Microsoft Certified: Azure Fundamentals (AZ-900)
