PROFESSIONAL SUMMARY

DevOps and Cloud Engineer with 2 years of experience building and operating cloud infrastructure across AWS and Azure, with additional hands on exposure to Google Cloud. Comfortable working across the full lifecycle of a DevOps role, from provisioning infrastructure with Terraform to running containerized workloads on Kubernetes and building CI/CD pipelines that teams rely on day to day. Has supported production systems through on call rotations and incident response, and has been steadily moving toward SRE practices such as defining SLIs and SLOs and tracking MTTR. Approaches infrastructure with a multi cloud mindset and is comfortable picking up whichever tools a team already uses rather than being tied to one ecosystem. Recently applied that same mindset to building an AI-powered log triage agent that classifies production incidents and proposes fixes from an approved list, cutting AI processing cost by 97 percent while keeping accuracy intact, part of a growing focus on applying LLMs and agentic AI to real DevOps and SRE workflows rather than just following the trend.

TECHNICAL SKILLS

- **Cloud Platforms:** AWS, Microsoft Azure, Google Cloud Platform (GCP)
- **Infrastructure as Code & Automation:** Terraform, Ansible, Python, Bash/Shell Scripting
- **AI & LLM Integration:** Agentic workflows, prompt engineering, cost-optimized API usage
- **Containers & Orchestration:** Docker, Kubernetes, Helm, ArgoCD
- **CI/CD:** Jenkins, GitHub Actions, Azure DevOps Pipelines, GitLab CI
- **Monitoring & Observability:** Prometheus, Grafana, AWS CloudWatch, Azure Monitor, Log Analytics
- **Databases:** MySQL, AWS RDS, PostgreSQL, MongoDB
- **Networking & Security:** VPC, Security Groups, Firewalls, DNS, SSL/TLS, Nginx, Load Balancers, IAM, Key Vault, Secrets Manager
- **Version Control & Collaboration:** Git, GitHub, JIRA
- **Operating Systems:** Linux/Unix administration

PROFESSIONAL EXPERIENCE

Cloud and Infrastructure Engineer, LTIMindtree

May 2022 - Jun 2024

- Provisioned and maintained AWS infrastructure for a microservices platform using Terraform (IaC), covering EC2, Auto Scaling, VPC, IAM, S3, and RDS, with a remote backend and state locking for safe team-based changes, cutting environment setup time by about 50%.
- Administered Linux servers supporting production workloads, using Ansible playbooks to automate configuration, package installation, and patching, and handling resource tuning and performance optimization to keep environments consistent.
- Ran Docker based containerized services on EKS with rolling deployments, scaling, and rollbacks, and built CI/CD pipelines with Jenkins, GitHub Actions, and ArgoCD for GitOps, following change management processes ahead of releases, which cut manual release work by around 40%.
- Configured Nginx and AWS load balancers for traffic routing, set up DNS and SSL/TLS, and controlled access using Security Groups and firewall rules.
- Managed MySQL and RDS databases supporting transactional workloads, with some exposure to MongoDB, and worked with PostgreSQL for reporting and analytics workloads involving complex joins and ad hoc queries, handling backup verification, recovery testing, and disaster recovery planning.
- Implemented monitoring and observability using Prometheus, Grafana, and CloudWatch across infrastructure, Kubernetes workloads, and application health, configuring SNS-based alerts, defining SLIs and SLOs, and tracking MTTR.
- Tracked incidents through JIRA, took on-call rotations via PagerDuty, documented root cause analyses and runbooks in Confluence, and used CloudTrail for account-level audit tracking, coordinating with development, QA, infrastructure, and security teams during resolution.
- Developed AWS Lambda functions for event-driven operational workflows, and wrote Python and Bash scripts to automate recurring ops tasks like backups, health checks, and cleanup jobs.

PROJECTS

AI-Powered Log Triage Agent for Automated Incident Classification and Remediation [\(GitHub Repo\)](#)

- Built an AI agent that reads raw server logs, filters out noise, and classifies real incidents by category, root cause, and fix, picked only from an approved list, so it never invents a fix nobody signed off on, directly cutting alert fatigue and incident response time.
- Cut AI API calls from 455 to 10 per run by grouping repeated log messages and querying once per unique pattern, cutting cost by about 97% with no drop in accuracy.

- Standardized incident classification and captured fix knowledge into the system itself, so any engineer on any shift gets the same proposed fix instead of relying on memory or experience, with a person still approving the action.
- Built two independent safety checks so the agent can only return an approved fix, routing anything uncertain to a human instead of guessing.
- Wrote a benchmark script that measures real latency, cost, and accuracy from live API calls rather than estimates, so results are reproducible by anyone who runs it.

Azure AKS CI/CD Pipeline with Monitoring [\(GitHub Repo\)](#)

- Provisioned Azure infrastructure using Terraform, including a virtual network, an AKS cluster on B-series nodes, Azure Container Registry, and a Storage Account, keeping everything within free tier limits.
- Built a CI/CD pipeline in Azure DevOps to build, containerize, and deploy the application to AKS.
- Set up an Azure Function triggered by a storage queue to process background jobs and write results to blob storage.
- Configured Azure Monitor and Log Analytics with a CPU based alert routed to an action group, reflecting a basic SLO and on-call alerting pattern.
- Used Key Vault with a managed identity so no credentials were hardcoded anywhere in the pipeline.

Cloud Infrastructure Automation on Google Cloud Platform [\(GitHub Repo\)](#)

- Provisioned virtual machines and networking components on Google Cloud using Terraform, and automated server configuration using Ansible playbooks.
- Installed and configured MySQL for backend data storage.
- Validated system health using Linux logs and basic service checks.

EDUCATION

Lendi Institute of Engineering and Technology

Bachelor of Technology in Mechanical Engineering, 2020

CERTIFICATIONS

- Microsoft Certified: Azure Administrator Associate (AZ-104)
- Microsoft Certified: Azure Fundamentals (AZ-900)
